DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1 – 23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 – 56. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the instant application are previously claimed in various combinations of claims in the patent. For example,

claims 1, 8 of the patent claim, a storage system to store information written by a data processing system to a plurality of logical volumes, wherein the data processing system accesses the plurality of logical volumes in the storage system using a logical volume address, the storage system comprising:

a plurality of storage devices that store the plurality of logical volumes (claim 1, col. 25, line 5);

Art Unit: 2186

a plurality of controllers that each is coupled to at least one of the plurality of storage devices and controls access to the one of the plurality of storage devices (col. 25, lines 6 – 13); and

a memory that stores a dynamic configuration table (col. 25, lines 14 – 19) that includes information specifying dynamic assignments of resources in the storage system, the dynamic configuration table being indexed by the logical volume address (claim 8), the dynamic assignments of resources in the storage system including one of a dynamic assignment of at least a portion of one of the plurality of storage devices to store at least a portion of one of the plurality of logical volumes, and a dynamic assignment of at least one logical volume to form a logical connection with another logical volume (claims 22 – 23 and others).

Response to Arguments

3. Applicant's arguments, filed March 24, 2004, with respect to claims 1 – 23 (claims 41 – 58 and 60 – 64 of the parent application), which have been previously rejected in the parent application, 09/004105, have been fully considered and are persuasive. The rejections of claims 1 – 23 have been withdrawn.

Allowable Subject Matter

4. Claims 1 – 23 would be allowable if the double patent rejections discussed above are overcome with a terminal disclaimer.
